## Envirolak AM

### Antimicrobial Coatings

Envirolak introduces “Envirolak AM” our newest line of antimicrobial coatings that are developed to help prevent the growth of bacteria, mold, mildew and algae on any finished surface.

Antimicrobial coatings offer enhanced protection against unwanted microbes and find use in healthcare, food services, janitorial and the residential market.

The benefits include:

- inhibits the growth of e-coli and staphylococcus (staph) bacteria
- inhibits the growth of mold and mildew in areas of frequent cleaning
- inhibits the growth of fungus and mold in damp or humid environments
- eliminates odours generated by bacteria or other microbes

The protection offered lasts for the life of the finish.

It does all this without compromising the quality and durability of the Envirolak finishes that you're used to expecting.

Envirolak AM technology can be incorporated into any of our existing topcoats, both pigmented and clear.

Talk to your Envirolak technical sales representative about adding Envirolak AM antimicrobial protection to your finishes today.
