

This is **why** we use **Envirolak**

1. Extremely Durable for Kitchens

Kitchens are high-traffic, high-moisture, high-touch environments. Envirolak coatings are known for:

- Strong chemical and stain resistance (coffee, oils, cleaners, etc.)
- Excellent scuff and scratch resistance
- Long-term colour stability and non-yellowing. This helps cabinets and trim stay looking new longer.

Underwater soak test

2. Health Friendly Professional Grade Water Based Wood Coatings

Envirolak is a waterborne system, so you get:

- A butter smooth finish that outperforms pre-catalyzed and post catalyzed conversion varnishes without the harmful off gassing of formaldehyde and nasty chemicals found in solvent based products.
- Formaldehyde is classified as a known human carcinogen by major health agencies.
- Formaldehyde off-gassing from new furniture, flooring, and renovation materials typically lasts from six months to over two years, though it can linger for up to 5-10 years in some cases

3. Eco-Friendly Choice

If sustainability matters to you, Envirolak formulates finishes to be:

- Low-VOC
 - HAPS-Free (Hazardous Air Pollutants)
 - Safer for applicators and home owners
- "We care for you and your family"

4. Full System Approach without limitations

Envirolak offer primers, sealers, topcoats, stains and glazes designed to work together to achieve any desired finish from zero sheen up to high gloss you get:

- Trusted Adhesion
- Stronger protection
- A more predictable professional result

5. Trusted by Cabinet Makers

Envirolak is widely used in professional shops across North America, especially for high-end cabinets and millwork, which is a good indicator of performance and reliability.
